

Stainless steel submersible drainage pumps for chemically aggressive liquids. Spherical clearance 10 mm.

CH 432, CH 436

Application

HOMA CH 432 and CH 436 stainless steel submersible drainage pumps are suitable for pumping corrosive, abrasive or chemically aggressive liquids, drainage water or chemicals containing soft solids up to 10 mm diameter. They are used in various domestic, industrial or municipal applications.

DIN EN 12050-2: Conformity and design approved and controlled by LGA, certificate No. 0220119.

Installation: Transportable or permanent.

Pumped liquid: Drainage water with abrasive or chemically aggressive contents, chemical liquids. Chemical waste or effluent.

Max. liquid temperature: 40°C, short term up to 60°C, for limitation to lower temperatures see specific chemical resistance of used materials.

Operation: Permanent (S1).

Design

Fully submersible, compact integrated motor-pump unit consisting of:

Pump: Single stage centrifugal pump with horizontal discharge.

Impeller: Open multi-channel impeller, spherical clearance 10 mm.

Motor: Fully submersible, pressure tight electric motor. Insulation class H, degree of protection IP 68. Thermal sensor embedded in the winding.

Cable: H07RN-F(PLUS)6G1,5

Model W: H07RN-F(PLUS)-4G1,5 with cable protective hose and longitudinally tight cable trumpet. Explosion proof motors according to  II G EEx d II BT4.

Shaft/Bearing: Large diameter stainless steel rotor shaft, pre-lubricated bearings.

Seals: Combination of mechanical seal and lip seal (CH 432) respectively 2 mechanical seals (CH 436) from silicon-carbide/ silicon-carbide and viton in a separate oil chamber. Oil inspection from outside.
